

Bioinfo@BiomX

Job title:

Bioinformatician

About the company:

BiomX is a microbiome company developing customized phage therapies designed to target and destroy harmful bacteria in chronic diseases such as inflammatory bowel disease (IBD) and colorectal cancer (CRC), and skin diseases. We discover and validate proprietary bacterial targets and customize our natural and engineered phage compositions against these targets.

Job description:

- Will be joining a team of experienced bioinformaticians
- Will work on:
 - Developing new tools for analysis and support of experimental efforts
 - Building computational pipelines for automating routine analyses
 - Developing infrastructure tools and resources

Duration:

The proposed position is for six months, with an optional extension at the end of the period

Requirements:

- Profound programming skills
- Molecular biology background (BSc or equivalent)
- Positive attitude, not afraid of challenges

Advantages:

- Fluent in Python
- PhD / MSc in bioinformatics, or a related field (engineering, computer science etc.)
- Peer-reviewed publications in resume
- Team player
- Strong sense of curiosity
