

There is an exciting new opportunity in the Oxford Protein Informatics group for a postdoctoral researcher to work in collaboration with GSK. We are recruiting to the vacancy now, for someone to start as soon as possible. You will carry out research in advancing computational methods for analysis of HDX-MS and structural data, in a dynamic and collaborative group and department, where our research is world-leading.

We need you to hold or be close to the completion of a relevant PhD/DPhil or equivalent and have programming experience, ideally in the area of machine learning. Your track record will include applying statistical methodology to complex problems, and the ability to plan and manage research projects independently. Experienced in working with experimentalists, you will be an excellent communicator with an appreciation of the different working environments on offer in industry and academia.

Queries about this post should be addressed to Professor Charlotte Deane (deane@stats.ox.ac.uk) or Professor Garrett Morris (garrett.morris@stats.ox.ac.uk).

This post is fixed-term for 3 years, in the first instance.

Only applications received before 12.00 midday on 23 March 2020 will be considered. Interviews will be held on 3 April 2020.
