

Position: Data Scientist

MetaSight is a stealth company, developing disease diagnostic methods based on high-throughput mass-spectrometry analysis of blood samples and AI. We are generating the world's largest database of blood molecular profiles linked to Electronic Health Records (EHR). The company is well funded and rapidly growing. The company is based in Rehovot, Israel.

Position Requirements

- Development of disease diagnostic and risk stratification methods using machine learning
- Integrating molecular datasets (big data) with Electronic Health Records (EHR)
- Work within a multi-disciplinary team with top data science experts as well as chemists, biologists, and physicians

Experience and Qualifications

- MSc/PhD in Exact Sciences
- Experience in machine learning and big-data (over 5 years)
- Experience in analyzing medical data
- Experience in C++ and Python
- Ability to work both independently and collaboratively in a fast-paced environment
- Highly organized, exceptional attention to detail
