UC Berkeley and UCSF recently launched a joint program called the **Bakar Computational Biomedicine Initiative (BCBI),** and we are recruiting multiple **Postdoctoral Fellows** as part of this initiative. BCBI offers a distinctive model for postdoctoral research that fosters scientific independence, interdisciplinary collaboration, and close engagement with important problems in biology and medicine. Fellows will have designated computational mentors but will not be confined to a single lab or predefined research program. Instead, they will have opportunities to pursue ambitious ideas and build collaborations with computational, experimental, and biomedical researchers across UC Berkeley and UCSF.

Applications are now being accepted through the following portal:

Apply here: https://berkeley.infoready4.com/#freeformCompetitionDetail/2034511
BCBI website: https://bcbi.berkeley.edu/

Completed applications received by **November 1, 2026**, 11:59 PM Pacific Time will receive full consideration.

Thank you,

Yun
